To Whom It May Concern,

Subject: Dane Currie

Dane has been a student in my Systems Integration Electronics 11 and 12 program and it is a pleasure to write in his behalf.

The program that Dane has participated in includes extensive hands on work with analog, digital logic circuits, electric motor design, and electronic control systems. He has demonstrated high degree of excellence in attempting and mastering a variety of complex challenges in producing his electronic projects. Dane has shown by his performance in class that he functions very well in a self-directed environment and is able to effectively solve electronic problems on his own.

In working with Dane as his Electronics Teacher, I have encouraged him to actively pursue a career in this area or a related occupation. I highly recommend that you seriously consider Dane for any opportunities related to working in the electronics field.

Yours truly,

Ken Hamilton
Electronics Teacher
